

Abstract

A laminated glass (14) has a laminated resin film (11) and two glass plates (16) laminated on both sides of the laminated resin film (11). The laminated resin film (11) is composed of at least one polyvinyl butyral film (13) and at least one fluorine resin film (12) which are laminated. A laminated glass (111) is composed of at least two non-tempered glass plates (113) and at least one resin interlayer film (112) which are bonded. At least one of the glass plates (113) is a non-tempered borosilicate glass plate.
